Claim 23 (Canceled)

Claim 24 (Canceled)

Claim 25 (New) A method for selective encryption within a document comprising:

_____ detecting a document encryption request;
_____ activating a document encryption routine;
_____ accessing a proposed document for encryption and tagging one or more sections of the
proposed document as designated for encryption;
_____ encrypting the tagged sections with multiple encryption keys;
_____ extracting the encrypted sections from the document;
_____ marking locations in the document where the extracted sections were located;
_____ storing extracted sections from the document in an appendix attached to the document;
_____ receiving a request to access an encrypted section of the document;
_____ determining whether a received decryption key for the encrypted section of the document
for which the access request was made is proper for that encrypted section;
_____ when the determination is that the received decryption key is proper, retrieving and
decrypting the section of the document for which the access request was made; and
_____ displaying the decrypted section of the document.

Claim 26 (New) The method as described in claim 25 further comprising after said displaying
step, the step of determining whether there is a request to access another encrypted section of the
document.

Claim 27 (New) The method as described in claim 26 further comprising when there is a
determination that there is a request to access another encrypted section of the document,
repeating the steps of:

_____ determining whether a received decryption key for the encrypted section of the
document for which the access request was made is proper for that encrypted section;
_____ when the determination is that the received decryption key is proper, retrieving and
decrypting the section of the document for which the access request was made; and
_____ displaying the decrypted section of the document.
